

SAP HANA Product Suite

Our international freight and supply chain control tower solutions are built on top of HANA. They leverage the HANA in memory technology to combine the high-volume transactions with analytics.

Are you looking for high performance analytical application?

EFFICIENCY & ACCURACY

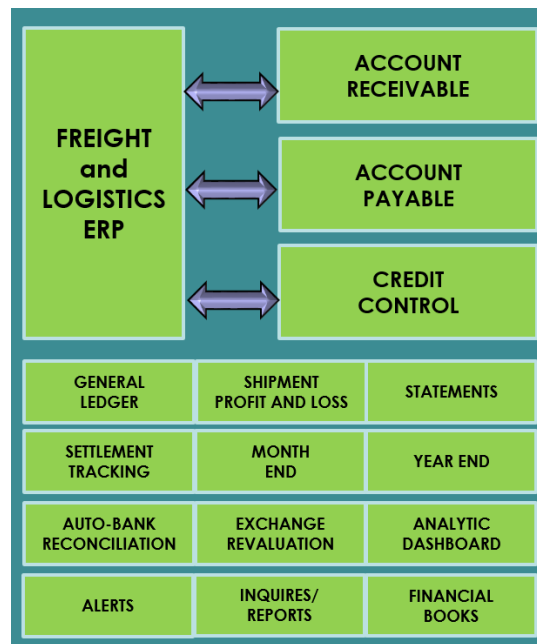

IFRS Compliance
 Flexible Settlement and Matching
 Partial or complete settlement can be made between multiple companies or in multiple currencies. To provide more flexibility, matching can also be performed before settlement. Transactions on account receivable or account payable and transaction history can be retrieved for your reference.

Default Exchange Rate
 Provides you with more control, and the exchange difference can also be generated automatically on journal voucher, receipt, payment or exchange rate revaluation.

Superior Documentation and Reporting Functions
 Allow multiple formats for Client Statement, and customized management reports (including Top Clients Report, Consolidated Financial Report, etc.) and enquiries (including Client Enquiry, G/L Enquiry and Bank Account Enquiry, etc.).

INLOG 4

Financial Accounting Operation & Management System – FAOM

International Freight & Logistics business requires network of companies which may locate in different countries and requires trading with multi currencies. FAOM is just the right product for your group of companies. FAOM is used by global freight and logistics companies to monitor account credentials, cash flow and job profit and loss.
